LAMISIL THERAPY

Your course of Lamisil therapy will complete in 90 days of one tablet each day.

There will be an initial liver function testing to determine if you are a candidate for Lamisil therapy. Another liver function test will be done halfway through your therapy (45 days). An office visit will be made for reevaluation for six to six and a half weeks after the initial appointment in which Lamisil is begun.

At the visit your treatment and nails will be evaluated and pending the results of the second blood test to check the liver, you will finish up the course of Lamisil.

Please be patient and keep in mind that the medication will stay in the nail and continue to work after the medication is finished. It takes up to a year for the nail to grow out to see if the treatment was successful.

Jon M. Sherman, D.P.M, F.A.C.F.A.S.
